HANDCRAFTED LOG HOMES

MANUFACTURE AND CONSTRUCTION OF HANDCRAFTED LOG HOUSES

At Finlog we have a passion. Our passion is to be able to provide truly the best possible log buildings to the UK market in the most ecological way possible. This means providing buildings that are not only efficient but also long lasting. Finlog have now added handmade log buildings to our range of buildings, so if you are looking for a more rustic feel to your new home or cabin Finlog can produce buildings to any size with a variety of log styles and notch types.

All our cabins can comply fully to current building regulations if required and are probably the most ecologically sound method of construction.

As hand made logs are a new line for Finlog the majority of the photos are from our Finnish Factory, the pictures in our other brochures are all Finlog UK buildings.

Saddle notch square log

Saddle notch round log

Done tail log

We have produced handmade buildings of over 1000sqm (11,000 square foot), all corner notches are 'hand scribed' by craftsmen and the cabin is fully assembled in our workshops prior to shipping.

Handmade log buildings are as suitable for large hotels, large homes or a small garden office. With typical 'u' values of around 0.11 they are one of the most ecological types of buildings to with regard to running costs and carbon footprints.

Modern and Traditional designs make this method of construction incredibly flexible as well as an environmental success story.

Hand scribed buildings have a longer order time than our machine log buildings, so allow around 12-15 weeks from order to delivery.

Please call one of our offices to discuss your log building and how the order process works.

All timber used is high quality northern pine-redwoods from truly sustainable forests. This timber is only available from North Finland/Russia. Other components such as doors and windows are UK sourced, helping keep our footprint as low as possible. Using only the best materials available ensure low maintenance-long life span, truly carbon negative building.
